

## MNS - DISTRIBUTOR FOR LANTIC ENTERTAINMENT SYSTEM

MNS (Maritime Network Systems SL) has made an agreement with Lantic Systems to be their distributor for Lantic entertainment system for the Balearic Islands.

### Lantic Yacht Entertainment System

Lantic Marine Entertainment System is a bespoke multi-room server based AV product built specifically for the large Yacht and Superyacht market. With over 100 SY installations under their belt they are experienced in all areas of on board AV and Cabin Control.

### Iconic Remote Control

The remote control for the system is incredibly easy to use with its ergonomic design and intuitive control allowing Owners and guest's instant control.

### Cost, Installation and Space Saving

With a structured network and physical product of this kind, installation time, labour, weight and costs are reduced dramatically, as well as allowing precious 'living space' to be increased in vital areas of the vessel. This is one of the reasons why many vessels have installed this "bespoke" Yacht Entertainment system over conventional home AV equipment comprising of many modular units per cabin/zone.

### Single Cable Network Streaming

A key differentiator over other (home) solutions are the built-in video inputs for sending satellite TV, navigation displays and CCTV to any area.

All main equipment is located in a central rack and in each area a single entertainment centre is fitted which includes a built in 5.1 surround sound amplifier and connected to the central media server via a single CAT 6 infrastructure throughout the vessel.

### HD/Blu-ray and Audio distribution

The Lantic system has a central media library for accessing over 10,000 audio files and 1,500 video files (including Blu-ray), with an intuitive graphical user interface for navigation through your music and movie collection. Bespoke iPod integration allows local access to individual music collection in the operator's area.

### Cabin Control

The system also easily integrates seamlessly with Lantic's cabin control system for lighting, heating, air con and blinds etc. which can also be offered as a stand alone cabin control system separately.

### Lantic News

Lantic is delighted to announce that streaming Blu-ray will finally become a reality. From April users will be able to upload high definition Blu-ray discs into the central server from where they will be available for streaming to any monitor on board the yacht. This break-through is the result of many months work by the development team and Lantic is understood to be the first manufacturer to offer this must-have service.

iPod integration will also take a major step forward, with the new software effectively transforming any connected iPod into a 'mini-server'. Once connected, the user will be able to fully access and control his device using the Lantic remote control and the menus on the local monitor. - Adding a whole new level of convenience and accessibility.

## NEW: NOWCASTING PRO OFFSHORE V.6.0 A REVOLUTION IN MARINE WEATHER FORECASTING

Nowcasting International are launching version 6 of their Nowcasting Pro Offshore weather forecast service. In addition to new graphical interface, the new version includes a "weather window" view and increased coverage.

Nowcasting International's high resolution forecasting tool, Nowcasting Pro is an innovative and user friendly metocean operational solution. Designed to provide high quality information and support offshore operational decision-making for increased safety and efficiency.

The data is displayed on a PC ashore or onboard the vessel and is transferred using standard maritime communications equipment, GSM, satellite phone, e-mail or via the internet.

### Benefits

Forecasting data based on the most advanced metocean forecast models available.

- Data is updated every six hours allowing for quick and effective decision making during weather sensitive operations.
- Increased efficiency by avoiding unnecessary or last minute scheduling changes.

- Increased operational cost savings by being able to accurately plan for weather related downtime.
- Improved safety at sea by giving users unsurpassed visibility of changing metocean conditions in a selected area, plus an inbuilt threshold alarm.
- Low communication costs by allowing the best use of all existing maritime communications systems.

## MNS - SOLUTIONS INCLUDES

### The VSAT expert

- Servicing Superyachts, cruise and offshore VSAT customers worldwide.

### Installation of telecom, satellite TV and navigation systems

- Satcom: VSAT, Inmarsat, Iridium, Thuraya,...
- GSM, GPRS, UMTS, HSDPA, DECT, PABX, CCTV, Intercom, Paging systems
- Computers and Computer networks
- TV@sea and entertainment systems
- Navigation systems

### Internet solutions

- High speed Internet via satellite
- Wireless internet connection for the entire boat
- Wireless internet connection between boat and shore connection
- Internet connection using "standard" methods as satcom, GSM and landline
- E-mail solutions

### Telecom systems

- Repair, refit & upgrade
